Fewer States Holding Alcohol Retailers Responsible for Harms from Illegal Service
Reinforcing commercial host liability helps reduce excessive alcohol consumption

Fewer states are holding alcohol retailers liable for harms caused by customers who were served illegally, according to a new report from researchers at Alcohol Policy Consultations and the Center on Alcohol Marketing and Youth (CAMY) at the Johns Hopkins Bloomberg School of Public Health. Published online by the *American Journal of Preventive Medicine*, the legal research study documents the gradual erosion of commercial host liability (also referred to as dram shop liability) from 1989 to 2011.

Commercial host liability holds alcohol retailers liable for alcohol-attributable harms resulting from illegal alcohol sales to patrons who are intoxicated or underage at the time of service. It applies to both on-premise (bars, restaurants and clubs) and off-premise locations. The Community Preventive Services Task Force recently determined that commercial host liability was effective in reducing a range of harms from alcohol in states that have it, including a median six percent drop in alcohol-related motor vehicle crash deaths.

The report found that in recent years many states enacted legislation to protect retailers from commercial host liability by increasing the evidentiary requirements, limiting the amount of liability awards and/or protecting certain retailers from liability. For example, between 1989 and 2011, the number of states that recognized liability for serving intoxicated adults without restrictions declined from 25 to 21, and states with one of these major restrictions increased from 11 to 16. Maps illustrating the erosion of these laws can be accessed at the CAMY website at <http://www.camy.org/action/commercial-host-liability/>.

“The erosion of commercial host liability in recent decades is a public health failure that directly contributes to the exorbitant human and economic costs of excessive drinking,” said lead study author James F. Mosher JD of Alcohol Policy Consultations, a public health legal

consultancy in Felton, California. “Alcohol retailers who operate negligently and engage in illegal serving practices should not receive special protection, denying those who are injured their day in court.”

The report also examined states’ adoption of the Responsible Beverage Service (RBS) practices defense, an optional provision in commercial host liability laws first developed in 1985 as part of a project funded by the National Institute on Alcohol Abuse and Alcoholism. In states that have adopted it, retailers can avoid liability if they show that they adhered to RBS practices at the time of the alcohol service leading to the injury and lawsuit.

RBS practices include instituting effective ID checks, training staff on identifying signs of intoxication and discontinuing marketing practices that encourage intoxication, among others. The report found that only six states had adopted the RBS defense provision despite the potential benefits to both public health and retailers.

“These findings underscore the critical importance of commercial host liability laws,” said David Jernigan PhD, co-author of the report and CAMY director. “These laws have been proven to prevent alcohol sales to underage and intoxicated persons, and should be a priority for public health.”

Excessive alcohol consumption is responsible for approximately 80,000 deaths in the U.S. each year. The economic cost of excessive drinking was an estimated \$223.5 billion in 2006, or approximately \$1.90 per drink consumed. Most binge drinkers (54.3%) who reported driving after their most recent binge drinking episode drank in an on-premises retail alcohol establishment such as a bar, club or restaurant, and 25.7 percent of this group reported consuming 10 or more drinks before getting behind the wheel. On- and off-premise alcohol retail outlets are also sources of alcohol for underage drinkers, particularly those aged 18 to 20 who have high rates of binge drinking and associated public health and safety problems.

This research was supported with funding from the Centers for Disease Control and Prevention.

The Center on Alcohol Marketing and Youth monitors the marketing practices of the alcohol industry to focus attention and action on industry practices that jeopardize the health and safety of America’s youth. The Center was founded in 2002 at Georgetown University with funding from The Pew Charitable Trusts and the Robert Wood Johnson Foundation. The Center moved to the Johns Hopkins Bloomberg School of Public Health in 2008 and is currently funded by the federal Centers for Disease Control and Prevention.
